**Re Item V**

**Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

**1. Cited documents**

- 1.1 The following documents are referred to in this communication; the numbering will be adhered to in the rest of the procedure:

D1: EP-A-0 373 340 (QUANTE AG) 20 June 1990 (1990-06-20)

**2. Clarity**

- 2.1 The application does not meet the requirements of Article 6 PCT, because claims 1 and 2 are not clear.
- 2.2 It is clear from the description on page 6, lines 2-15 and page 10, lines 7-20 that the following feature is essential to the definition of the invention:  
the connector is made from any suitable material that has the property of shape memory.  
Since independent claim 1 does not contain this feature it does not meet the requirement following from Article 6 PCT taken in combination with Rule 6.3(b) PCT that any independent claim must contain all the technical features essential to the definition of the invention.  
This essential feature is only implicitly contained in independent claim 2 (page 18, lines 15-16; page 19, lines 2-3) and has to be explicitly added (Rule 6.3(b)).

**3. Novelty and inventive step**

- 3.1 The subject-matter of claims 1 and 2 is considered to be both novel and inventive (Article 33(2) and 33(3) PCT) for the following reasons.
- 3.2 The subject-matter of claim 1 relates to a connector assembly for connecting

**WRITTEN OPINION  
SEPARATE SHEET**

International application No. PCT/CA03/01195

optical fibers comprising:

a connector made from a material having the shape memory property, the connector comprising a longitudinally extending body, and said body having a conduit, and said body comprising a plurality of finger projections;

a connector housing comprising four quarter portions, and defining a connector chamber for receiving said connector, said quarter portions configured such that two of the quarter portions when assembled comprise a first end and two of the quarter portions when assembled comprise a second end of said connector housing and further configured to exert tractional force on the said connector when said connector is positioned in the connector chamber, by axial rotation of said first part end relative to said second end of said connector housing, each of said connector housing ends comprising an aperture and pass through conduit between said aperture and said connector chamber; and

a needle capable of insertion through said aperture, pass through conduit and connector conduit; and capable of expansion of the radial diameter of said connector conduit when inserted there through.

- 3.3 The closest prior art is represented by document D1, which describes a connector for optical fibers. The end portion of each fiber is fitted in a connector element which has a bush which encloses three short rods of circular cross-section. These rods form a centralising device for the end of the wave guide. Each half of the coupling has an outer bush which receives the inner bush of each connector element. It aligns them one with the other, so that the fibers are also aligned with each other.
- 3.4 The difference between the subject-matter set out in claim 1 and that of D1 is that the connector of D1 is not made from a "shape memory" material and that it has no needle.
- 3.5 The technical problem to be solved by the present invention is to provide a "last mile" optical fiber connector with high mechanical precision, enabling frequent connections and disconnections.
- 3.6 The tractional force applied by the four quarter portions on the connector deforms the connector according to the elastic limits of the connector made of a material having the property of shape memory. The inserted needle causes an extension

**WRITTEN OPINION  
SEPARATE SHEET**

International application No. PCT/CA03/01195

of the diameter of the conduit. After removal of the needle but still under tractional force, optical fibers to be connected can be easily inserted in the enlarged conduit. The relieve of the tractional force on the connector then reduces the diameter of the connector conduit according to the shape memory property, therefore securing the optical fiber abutment.

The specific features of the solution provided by claim 1 are neither disclosed in nor rendered obvious by either one of the prior art documents listed in the European search report. Therefore, the subject-matter of present claim 1 is considered to be both novel and inventive (Articles 33(2) and 33(3) PCT).

- 3.7 The subject-matter of independent claim 2, which defines a method of connecting optical fibers, is also considered to be both novel and inventive (Articles 33(2) and 33(3) PCT).

**4. Formal aspects**

- 4.1 Independent claims 1 and 2 are not in the two-part form in accordance with Rule 6.3(b) PCT.
- 4.2 The features of the claims 1 and 2 are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).
- 4.3 To meet the requirements of Rule 5.1(a)(ii), the document D1 should be identified in the description and the relevant background art disclosed therein should be briefly discussed.
- 4.4 In order to facilitate the examination of the conformity of the amended application with the requirements of Article 34(2)(b) PCT, the applicant is requested to clearly identify the amendments carried out, no matter whether they concern amendments by addition, replacement or deletion, and to indicate the passages of the application as filed on which these amendments are based (see also Rule 66.8(a) PCT).  
If the applicant regards it as appropriate these indications could be submitted in handwritten form on a copy of the relevant parts of the application as filed.
